

Frontier, by Sentinel Building Systems, is their newest building line for the small to medium sized storage/garage/shop market. It is available as either all steel or a steel/wood combination. Available in widths to 40 feet, with a clear span frame that follows the roofline, the Frontier retains a clean unrestricted overhead clearance and unencumbered workspace. Booth 4004.

Because large grain augers and conveyors are harder to maneuver, the new Auger Steer makes auger steering and positioning easy. The Auger Steer, distributed by Central City Scale, Inc. and manufactured by Triple Steer Manufacturing, Ltd. installs as an add-on kit for axles. It allows the axle and whatever it supports to be fully steered from the tractor cab with a set of steering knuckles activated by a new hydraulic cylinder. Booth 131.
